

## Password Manager App

Password Manager: Securely store and retrieve passwords locally.

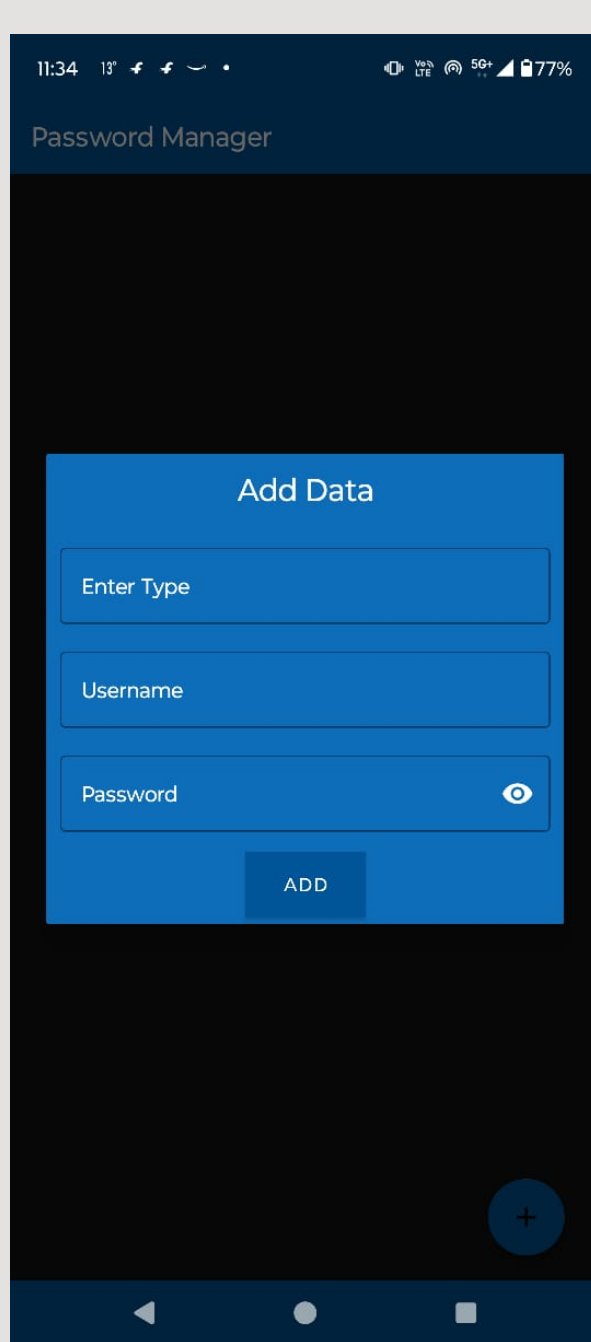

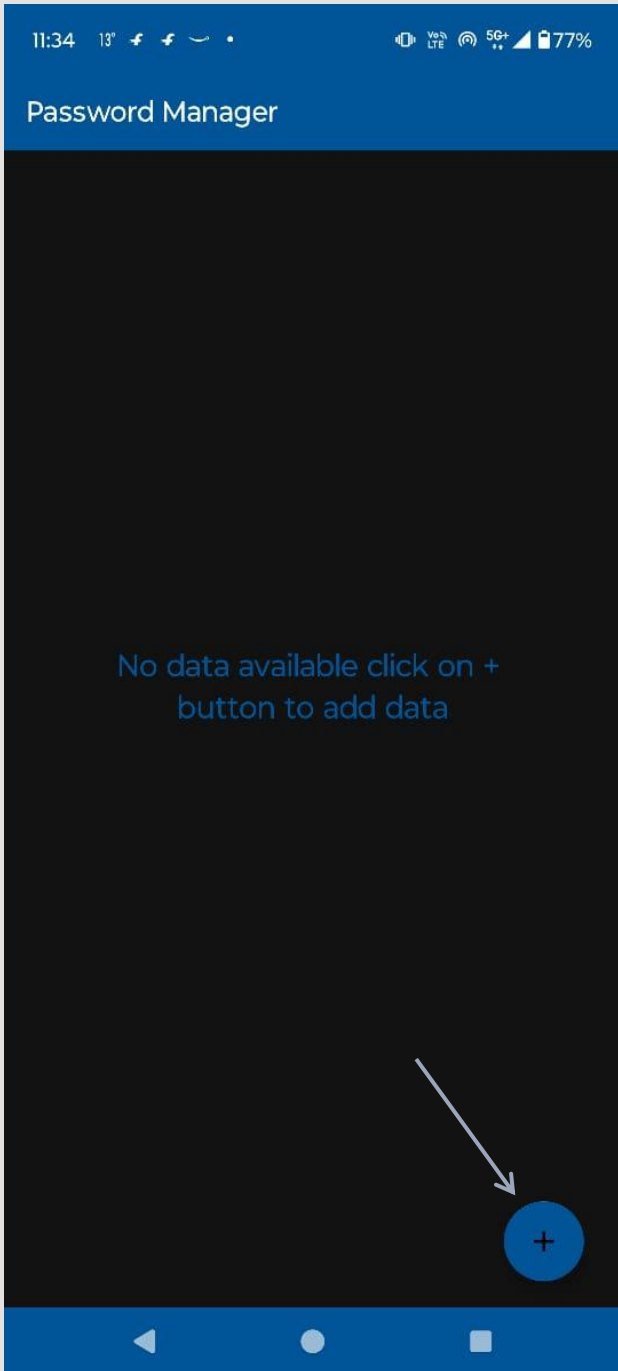

## Starting User Interface

It takes your Bio metric Authentication for accessing this App. Which makes it secure.

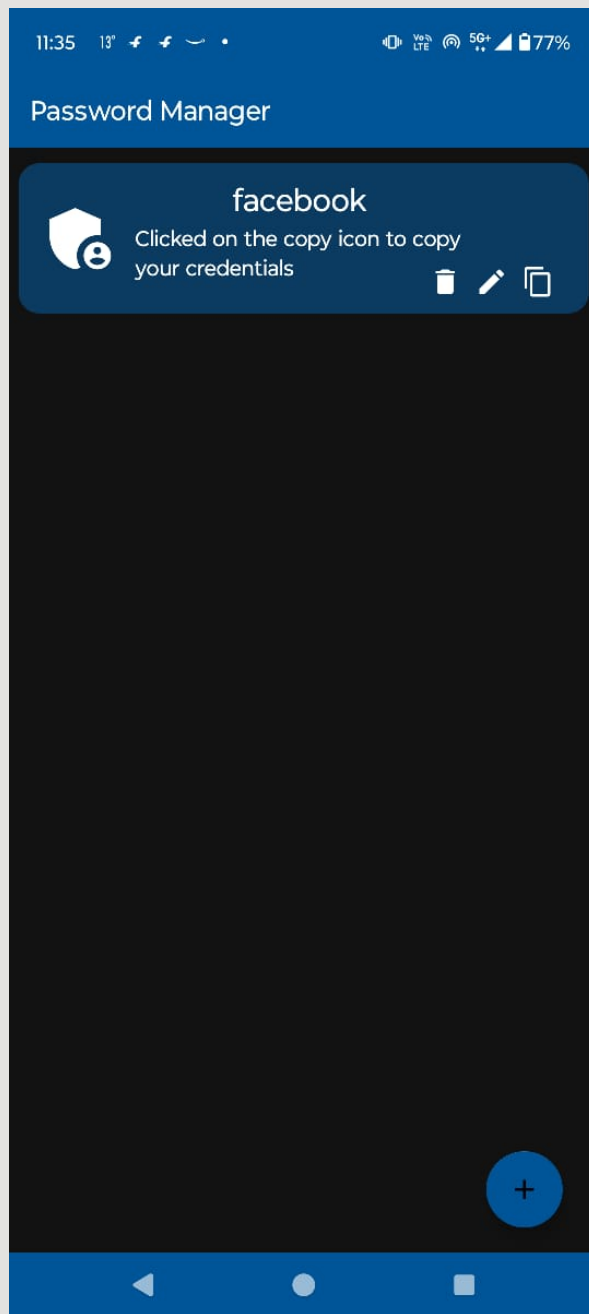

## Second User Interface

We have to create six digit pin for accessing this app.  
This six digit pin became the app unlock passcode.

## Third User Interface

When we click on add icon then we can add here user data password for future use. Then you can enter your type, Username, Password for saving Data then we click on add button.

## Last User Interface

This is the last user interface which provide you to view your Data edit your data and delete your data.

*THANK YOU*
